DETAILED ACTION

Allowable Subject Matter

Claims 1-13 are allowed.

The following is an examiner's statement of reasons for allowance:

Regarding claims 1, 6 and 10, the prior art of record teaches a digital receiver for multi-carrier signals where a RAKE receiver locates the position of channel paths and tracks them individually by assigning a code tracker for each path. Furthermore, the prior art of record teaches coping with mobile unit's motion requiring signal processing with less frequent updates and with lesser time resolution. However, the prior art of record, neither alone or in combination fail to specifically disclose in a receiver, generating a training sequence corresponding to a given cell parameter; correlating extracted data samples with the training sequence over different lags to locate the position of the first significant path which defines the beginning of the frame. Then accumulating the correlated data N times, where each time is an offset apart from the previous time which produces an accumulation vector. From the accumulation vectors, determining the most significant path value that is the largest value and calculating a frame synchronization correction value based on the difference between the first significant path position and the frame offset and adjusting the frame synchronization based upon the frame synchronization correction value.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
